

Instructions:

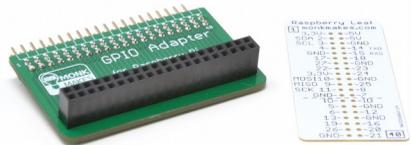

GPIO ADAPTER FOR Pi 400

SKU00087

v1A

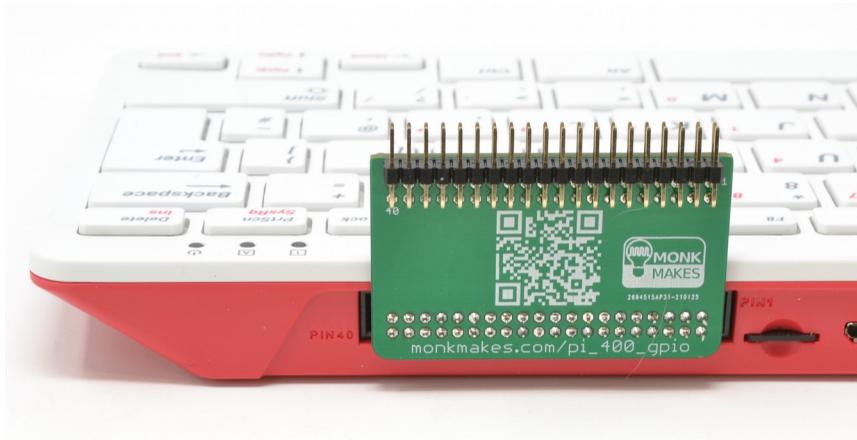

The MonkMakes GPIO Adaptor for Pi 400 makes it easy to use existing Raspberry Pi accessories with the new Raspberry Pi 400. It's also makes the GPIO pins much more accessible for use with jumper wires.

The adapter is supplied with a Raspberry Leaf GPIO template.

Fitting the Adaptor

The socket on the adapter needs to line up exactly with the pins on the Raspberry Pi 400. It is possible to misalign these by one hole position either left or right (but not up or down). So, fit it as shown below, with almost the same amount of gap, either side of the adapter.

Raspberry Leaf

The Raspberry Leaf fits onto the pins of the adapter as shown below. Note that pin [1] is to the left when looking at the front of the Pi 400.
